1. The Root Cause: A Hyper-Sensitive Nervous System

- **The Indicator:** Her Ascendant Lord (Mercury) is in the **12th House**.
- **The Detail:** The Ascendant Lord represents the physical body and constitution. Mercury represents the nerves. When the planet of nerves is placed in the 12th House (the house of loss, isolation, and sleep), it creates a nervous system that is easily depleted.
- **The Result:** She lacks a “filter.” Her nervous system absorbs too much data, noise, and energy from her environment. Her migraines are likely **Sensory Overload Migraines**. They occur when she has been social for too long, exposed to bright lights/loud noises, or hasn't had enough time alone to “reboot.”

2. The “Hidden Sun” Factor (Eye & Vitality Strain)

- **The Indicator:** The Sun is also in the **12th House** (Conjoined with Mercury).
- **The Detail:** The Sun represents the physical head, the right eye, and general vitality. Placing the Sun in the 12th house is like putting a lightbulb under a thick blanket—it struggles to shine.
- **The Result:** This placement indicates that her eyes are a major weak point. Her migraines likely start with **ocular tension** or are preceded by visual auras (blurriness/light sensitivity). If she does not sleep enough (12th house rules sleep), the Sun “burns out,” leading to immediate head pain.

Mix makes document conversion simple and beautiful.No more fighting with complex toolchains.

3. Ketu in Aries: The “Phantom” Pain

- **The Indicator:** Ketu (The South Node) is placed in **Aries**.
- **The Detail:** Aries is the zodiac sign that specifically rules the **brain, cranium, and face**. Ketu is a smoky, nebulous planet that causes things to shrink or behave erratically.
- **The Result:** Ketu in Aries is a classic marker for **neuralgia** or “strange” headaches that are hard to diagnose. These aren't just standard aches; they are sharp, shooting pains that come out of nowhere and disappear just as fast. It also suggests that her headaches are often linked to **sinus issues** or inflammation in the upper face area.
